

accomplished producer based in New York, an active member of the Producers Guild of America, and the collaboration has already yielded good results, including valuable contacts for our visit in Los Angeles. Oscarwinning VFX supervisor Dave Stump joined us earlier. New York, St. Louis, San Francisco and Los Angeles: Pontus and Audun did a tour of the US in February and March, meeting users, partners and potential customers. The trip was very successful, with several high points, including meetings with Netflix, the Academy of Motion Picture Arts and Sciences, the International Cinematographers Guild, Local 871 (the script supervisors' union), one of the world's leading DITs, and Apple. See the separate attachment for a more detailed summary. NAB: Andreas and Audun travelled to the National Association of Broadcasters convention (NAB) in Las Vegas for three hectic days in April. NAB gathers 100,000 participants from film and TV. It's a very efficient way of meeting people in the business, and getting an updated picture of the business landscape. The most exciting meeting was with PIX System, one of our most important competitors. It was interesting to note that they regarded the indie market as bigger than their own. Andreas was able to secure us an invitation to the DIT-WIT party, with some of the world's leading DITs in attendance. It was a great place for informal feedback on Drylab Viewer. The pattern was the same as for other users: Initial polite interest turns to real enthusiasm the moment someone is able to personally try Drylab Viewer! We also met with Pomfort and Apple about our ongoing collaborations; ARRI and Teradek. Paralinx about camera integration; Amazon, Google and IBM about cloud computing. WWDC and Silicon Valley: We were very pleasantly surprised to be invited by Apple to their World Wide Developers Conference in San Jose in June, despite not having applied. It's a valuable chance to learn and make new connections. We're also setting aside time to meet other potential partners. Cine Gear: We have decided not to attend the Cine Gear expo in L.A. this year, since feedback from many users about the show were mixed, and our planned beta version of 3.0 is slightly delayed. Development and launch: Development is around one month behind our original schedule. We expect the delay to decrease, with new developers on board. The launch of Drylab 3.0 will take place at the International Broadcasters Convention in Amsterdam in September, and we are working hard to get solid feedback from pilot users before then. Annual General Meeting: Drylab's AGM will be held on June 16th at 15:00. An invitation will be distributed to all owners well in advance. We hope to see you there! As you can see it has been a hectic spring that has given us a lot of confirmation about our product. We are now working eagerly and hard towards the US launch with Drylab 3.0, while keeping momentum in Europe with our existing system
